🚗 Car Number Plate Recognition System

📌 Project Description:
This project detects vehicle number plates from images using Python and Optical Character Recognition (OCR).

🛠️ Technologies Used:
- Python
- OpenCV
- EasyOCR
- Google Colab

⚙️ How It Works:
1. Upload a car image.
2. The system detects the number plate area.
3. OCR extracts the vehicle number.
4. The detected number is displayed.

📂 Files Included:
- main.py (project code)
- car.jpg (sample image)
- README file

✅ Applications:
- Traffic monitoring
- Parking systems
- Security surveillance
